

In the Specification:

Please amend the Abstract of the Disclosure as follows:

~~The aim of the invention is to produce an~~ A method for producing an effect yarn on an open-end rotor spinning machine, formed from an alternating line-up of yarn sections and effects consisting of pre-determined thickenings. ~~To this end, wherein~~ an effect is produced where the yarn is joined by means of a piecing ~~piecing~~ end, in the piecing ~~piecing~~ region of the yarn located downstream of the piecing ~~piecing~~ end, following a break in the thread. The ~~invention~~ ~~enables the~~ quality of the yarn produced in this way is to be improved such that unwanted deviations from the pre-determined repeat of pattern of the effect yarn, caused by piecing ~~piecing~~ regions, are eliminated.
